Executive summary

327 people answered the Your Voice survey (30 rating questions, six open questions, one HR-priority choice) in five languages. People are proud of Safewater Lines and help each other. The gaps are in how people decisions are made and explained, and in whether leaders visibly act on what employees raise.

92.4%
proud to work here

87.5%
intend to stay 3–5 years (anonymous: 78.0%)

74.6%
say people decisions are consistent

79.8%
say leaders act on feedback

Recommendation

1. **Protect** pride, belonging and own-team support (92.4%, 90.2%, 91.1% favourable).
2. **Priority 1: fair, explainable people decisions, growth and recognition.** The five lowest-scoring questions sit here; Fairness accounts for 31% of the explained link to recommend, satisfaction and intention to stay.
3. **Priority 2: leaders listen and visibly act.** The top actionable link to outcomes, the most common HR request (67 people) and the most-raised "one change".
4. **Targeted fix: cross-team handovers**, starting in Customer Service (45 people rate their own team 4–5 but cross-team work 1–3).
5. **Route pay, benefits and facilities** to the annual review, and **drop the name field** from the next survey.

The order comes from a four-source evidence check (Section 15). Only the two priorities are strong on all four sources:

Theme	Score	Outcome link	HR choice	'One change'	Strong (of 4)
Fair, explainable people decisions & growth	Strong	Strong	Strong	Strong	4
Leaders listen and visibly act	Strong	Strong	Strong	Strong	4
Recognition of contributions	Strong	Weak	Medium	Strong	2
Cross-team collaboration	Medium	Strong	—	Weak	1
Support when problems arise	Weak	Weak	Strong	Medium	1
Workload & role clarity	Weak	Medium	Weak	Strong	1
Pay, benefits & facilities	—	—	Strong	Medium	1

How to read this report

- Favourable = 4–5 (Usually / Almost always). 3 = Sometimes, not neutral. Percentages use all 327 responses unless stated.
- Headcount was not supplied, so the response rate is unknown. 69% gave their name, and anonymous respondents are less favourable on every key question.
- Links to outcomes are associations from one survey, not causes. Comment coding was AI-assisted with one documented re-review; it is not independently validated.

Part 1 — From data to action: the full analysis

Updated 29 October 2026. This is the complete reading guide for the analysis so far: start at the base, follow how each method adds evidence, then see how the findings become proposed actions. All calculations, coding decisions and outputs remain in one notebook (*00_data_understanding_eda.ipynb*). The assignment is documented in the brief (*PROJECT_BRIEF.md*).

Read this first: what is complete?

The analytical draft, a documented same-assistant review and the proposed implementation roadmap are complete. The review reread 568 comment records, including all 104 original flags, and changed 53 coding/status decisions. 75 cases still need context clarification/confirmation. No independent team-member or native-speaker validation is claimed. A roadmap with proposed owners, timing and measures is ready for organisational review; the PowerPoint is not yet built.

Cross-team execution and fairness were first selected as the focus. The Step 7 prioritisation check (section 15) revised the order: Priority 1 is fair, explainable people decisions and growth, with recognition; Priority 2 is leaders listening and visibly acting; cross-team handovers are a targeted fix; role clarity/workload/backup supports the pilot. The order rests on four sources of evidence with grading rules fixed in advance, not on a single synthetic score.

The progression at a glance

Level	Question	What it adds
0. Purpose	What organisational decision must this serve?	Preserve strengths and define practical improvements, not just scores/dashboards
1. Source and structure	What exactly did we receive?	327 master response records, six rating blocks, comments and one HR choice
2. Quality and types	Can the variables be interpreted consistently?	Harmonised labels, documented grouping, identified missing/repetitive answers
3. Base distributions	How did people answer each question?	Counts, Sometimes/unfavourable shares, favourable shares and working means
4. Measurement and relationships	Do items cohere, move together or vary by group?	Reliability diagnostics, exploratory associations, adjusted group comparisons and sensitivity
5. Employee voice	What do employees value and ask to improve?	Contextual multi-label topic coding and separate response stances
6. Integration and focus	How do ratings and comments inform the same decision?	Paired cross-team profiles, fairness breadth, comment links and focused groups
7. Network	Which topics are mentioned together?	An exploratory same-answer map with prompt-dependence controls
8. Review	Are the decisions traceable and the claims accurate?	Second assistant reading, before/after counts, unresolved cases and recalculated facts
9. Action	Who could do what, when, and how would we assess it?	0–90-day pilot roadmap, KPI definitions and decision gates

0. The organisational purpose

The assignment asks what the survey reveals about employee experience and culture, what Safewater Lines should preserve, where improvements are needed, and how HR/business leaders can turn findings into measurable interventions. Required outputs include analysis, an evidence-backed organisational story, understandable visuals, prioritised recommendations, a roadmap and an executive presentation. Submission/ presentation is 30 October 2026 at TISS; a presentation duration was not supplied.

Our decision chain is: organisational question → survey evidence → bounded interpretation → proposed action → accountable owner → baseline/success measure → review decision. A plausible explanation is not automatically a demonstrated cause.

1. Start with the source and the unit of analysis

Source: `data/raw/Your Voice- Responses 21 OCT - FINAL.xlsx`. We analyse `SWL - MASTERDATA`, which contains 327 response rows and 43 original columns after the two-row header. It has 30 rating items, six comment questions, one single-choice HR priority and six demographic/identity fields including an optional name. Removing the name field leaves five demographics. The clean table has 56 columns after adding documented derived variables.

The five language exports total 330 rows, while the master has 327. There is no verified row-level deletion log, so we do not claim exactly three test cases were removed. The language sheets contain tenure bands converted into dates; the consolidated master is the analysis source. `Masterdata - do not refer` is excluded. `Sheet2` contributes an HR-option theme mapping, not its old pivot counts.

A row is a supplied response record, used as the available proxy for a contributor. We have not independently verified unique employee identities. An individual item answer, a comment, a response record and a group are different units; do not mix their denominators.

There are 9,810 valid rating answers (327 × 30), not that many independent employees. There are 1,892 nonblank comment records from 321 source records. Eligible workforce size, workforce composition, collection procedures, earlier waves and observed turnover/performance outcomes were not supplied. The original response rate and representativeness cannot be calculated from these files.

2. Variables, types and transformations

Variable	Analytical type	How to understand it
location / department / gender	Nominal category	Labels without numerical order; useful for descriptive grouping
designation	Free-text category	Inconsistent role labels; keyword-based level is an analyst approximation
tenure	Ordered category	0–3, 3–5, 5–10, 10–15, 15+ years; bands, not exact service years
CRE1…OVR5	Ordinal item, stored as 1–5	Ordered frequency categories; equal spacing is not guaranteed
oe_leaders_trust / oe_feel_valued / oe_fairness_concern	Qualitative text	Leadership trust, support/value/respect and fairness feedback
oe_value_most / oe_teamwork / oe_one_change	Qualitative text	Strengths to preserve, teamwork suggestions and one change
hr_priority / hr_theme	Single-choice category / grouped category	One chosen HR improvement, mapped into eight themes

Variable	Analytical type	How to understand it
region / level / dept_group	Derived categories	Cities grouped geographically; approximate levels; departments with fewer than 10 responses pooled into Other
straightliner / gave_name	Boolean flags	Same rating throughout / name supplied; neither is a diagnosis of invalid or biased answers
CRE / RES / FAI / PRI / CAM / OVR	Working numerical summaries	Equal-weight means of five specified items per block
CULTURE_MEAN / fav_pct	Derived mean / percentage	25-item culture summary / respondent's favourable share across all 30 items

We standardised case/label variants and mapped Usually/Often together. The scale is 1 Almost never, 2 Rarely, 3 Sometimes, 4 Usually/Often, 5 Almost always/Always. Sometimes is not neutral. CSV stores category labels; ordering is established explicitly in the notebook where needed.

The dedicated full_name field is dropped from the processed survey. Free-text answers can still contain identifying information: the processed survey remains confidential and must not be treated as anonymised. Presentation exports contain aggregate findings and no raw comments or case-level audit IDs. The raw workbook remains unchanged.

What the quality checks found

All 30 rating items and demographic fields are nonblank in the supplied master; nondisclosure labels still occur, so this does not establish that all demographic information is known or that the form forced answers. Optional names are supplied in 227 records (69.4%); missing comments vary by question. No exact duplicate rows were found after excluding names. Fifty-four records (16.5%) use the same category throughout; 51 use all 5s, two all 4s and one all 3s. Keep them in the primary analysis and label any exclusion as sensitivity. These checks do not prove careless responses, a halo effect or social-desirability bias.

3. Define measures before ranking anything

Item favourable % = count selecting 4–5 / valid item answers ×100. Unfavourable % uses 1–2; top-box uses 5. Keep Sometimes separately. Block favourable percentages pool the answers to the five items; they are not the percentage of employees given a particular engagement classification.

A block mean averages five items per record, then records. This uses equal item weights and a working equal-spacing assumption. CULTURE_MEAN averages 25 items in CRE/RES/FAI/PRI/CAM, excluding OVR; it is not an official Trust Index or a validated engagement scale. PRI3 intention to stay is inside it, so a composite–PRI3 correlation would have part–whole overlap and should not be treated as a driver result.

Across all 30 items, 84.92% of rating answers are favourable. Recognition RES4 illustrates the denominator: 237/327 favourable (72.48%), 56 Sometimes and 34 unfavourable. A 72.5% favourable share does not mean the other 27.5% are all dissatisfied. Different ranking metrics can produce different orders.

4. What the base ratings reveal

Code	Survey block	Mean / 5	Favourable answer %	Alpha
PRI	Pride	4.58	91.19	0.84
OVR	Overall employee experience	4.48	89.42	0.90
CRE	Credibility	4.35	84.77	0.88

Code	Survey block	Mean / 5	Favourable answer %	Alpha
CAM	Camaraderie	4.35	83.30	0.79
RES	Respect	4.32	82.63	0.88
FAI	Fairness	4.17	78.23	0.86

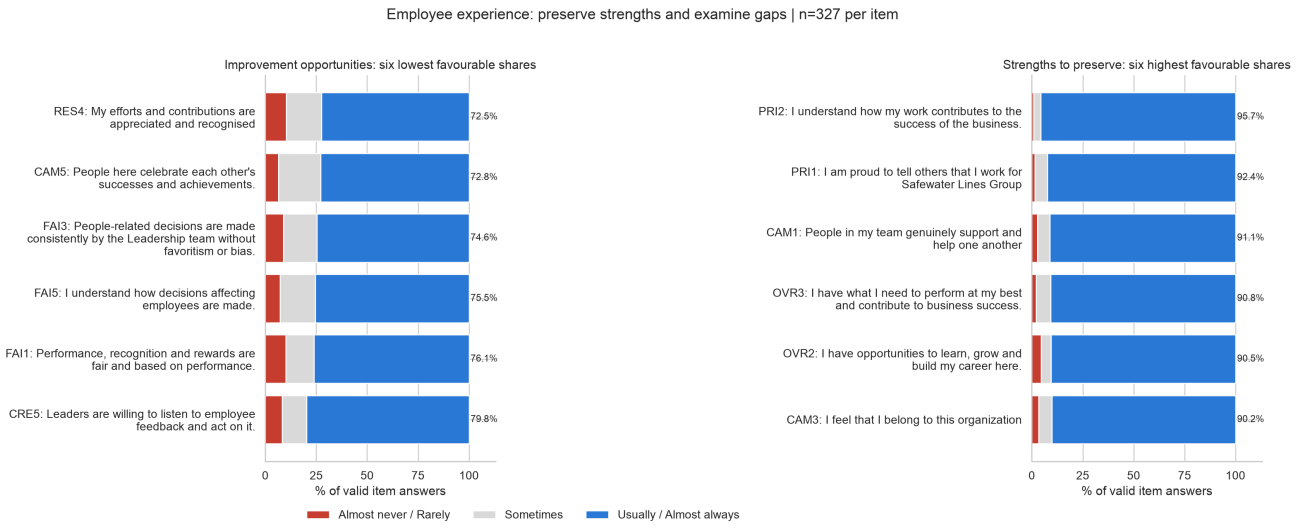

Pride is the highest-scoring supplied block and Fairness the lowest on the working mean. These are within-survey comparisons, not external pass/fail thresholds or certification results. Employees can feel proud and supported while asking for more consistent decisions and recognition.

Lowest favourable shares worth examining

Item	Question	Favourable %	Sometimes n	Unfavourable n
RES4	My efforts and contributions are appreciated and recognised	72.48	56	34
CAM5	People here celebrate each other's successes and achievements.	72.78	68	21
FAI3	People-related decisions are made consistently by the Leadership team without favoritism or bias.	74.62	54	29
FAI5	I understand how decisions affecting employees are made.	75.54	56	24
FAI1	Performance, recognition and rewards are fair and based on performance.	76.15	45	33
CRE5	Leaders are willing to listen to employee feedback and act on it.	79.82	39	27

The strengths include contribution clarity PRI2 (95.72% favourable), company pride PRI1 (92.35%) and within-team support CAM1 (91.13%). Overall growth OVR2 is also positive (90.52%); comment requests about access/ progression do not erase that strength.

See the strength/gap figure (*strengths_and_opportunities.png*) and all item counts (*item_evidence_profile.csv*). The charts retain category distributions rather than hiding them behind averages.

Strengths and opportunities by question (favourable share).

5. How much further do statistical methods let us go?

Cronbach alpha is approximately 0.79–0.90 within blocks and 0.97 across all 30 items. It indicates shared variation/internal consistency under assumptions, not validity, one factor, separate dimensions or a proven halo effect. We did not automatically remove items or fit factor analysis merely because alpha is high.

Spearman correlation asks whether higher ratings on one item tend to accompany higher ratings on another. OVR2 career/learning and PRI3 intention to stay have rho ≈ 0.57. This is exploratory association, not proof that changing career provision would cause a known turnover reduction. PRI3 is intention, not observed turnover; OVR1 is five-point advocacy, not standard eNPS.

Kruskal–Wallis explores rank-distribution differences between eligible independent response groups. BY adjustment is applied to the 11 listed overlapping full/sensitivity comparisons. Tenure has the clearest signal after this adjustment (adjusted p approximately 0.028 in full and sensitivity views). This is an omnibus result, not proof of a specific pairwise difference, a cause or workforce generalisability. Department/region/name-disclosure comparisons are less conclusive after adjustment; a large p-value does not prove equality.

Tenure	Response n	Culture mean	Growth mean OVR2	Intention to stay PRI3
0 - 3	124	4.30	4.40	4.41
3 - 5	53	4.21	4.30	4.25
5 - 10	56	4.38	4.59	4.61
10 - 15	41	4.70	4.83	4.90
15 & Above	53	4.32	4.49	4.51

The 3–5-year group is descriptively lower than the other tenure groups on the culture mean; it has 53 responses. Customer Service has a comparatively low culture mean (4.09, n=51), but the department interpretation is exploratory. Do not automatically label a segment an attrition risk. Small-group scores are suppressed using a provisional n<10 rule; the focused follow-up uses groups n≥30 and suppresses counts 1–4. These rules are not guarantees of anonymity or precision.

Removing straight-liners lowers block means by approximately 0.07–0.15, while Pride remains highest and Fairness lowest. The exclusion changes the sample and does not recover a known unbiased truth. HR-priority Cramér's V is descriptive; routine chi-square p-values were withheld because all five examined tables had sparse expected counts.

6. What employees selected as HR's one priority

Selected HR theme	Records	Percent
Communication	80	24.46
Grievances	64	19.57
Development	51	15.60
Benefits & Facilities	51	15.60
R&R	30	9.17
Process & Policies	20	6.12
Approachable	18	5.50
Engagement	13	3.98

This is one selected priority per record. It is not directly comparable with multi-label comment counts. For example, a person may request recognition in one comment but select communication as their single HR priority; that is not a contradiction.

7. From comments to contextual topics

We use applied codebook-based thematic content analysis. The assistant reads each answer in question context and stores explicit topic assignments, rather than treating keyword hits or a sentiment score as completed interpretation. The original ledger is retained, guarded by a hash of comment text/order; documented review edits are then applied before aggregating outputs.

There are 15 topic categories, with inclusion/exclusion rules. Several can apply to one answer. Response stance is separate: current strength, request/concern, mixed, no concern/no change proposed, no valued aspect, nonresponse, unclear or unresolved reference. A negative answer to the fairness-concern prompt is preserved as no concern; nothing in the preserve prompt has a different meaning. No text length or polish proves authorship or truthfulness.

After review, 1,590 of 1,892 nonblank answers receive at least one topic. That is coverage, not accuracy. Request counts below deduplicate each source record per topic across questions. Preserve counts use explicit team/organisation strengths in the preserve prompt. Both can occur for one record and topics overlap; totals do not add to 100%. The main request percentages divide by all 327 response records, not the workforce or only dissatisfied employees.

Topic	Request records	Request % of 327	Preserve records
Communication and decision explanations	194	59.33	12
Recognition and performance feedback	179	54.74	4
Teamwork and cross-team coordination	176	53.82	119
Support and respectful treatment	139	42.51	77
Career growth and learning	136	41.59	18
Employee voice and follow-through	134	40.98	10
Fair treatment and decision consistency	114	34.86	3
Role clarity and work processes	91	27.83	7
Workload, boundaries and flexibility	78	23.85	6
Pay, incentives and benefits	51	15.60	9
Trust, integrity and autonomy	49	14.98	61
Facilities, tools and staffing	39	11.93	0
Activities and social connection	38	11.62	4
Business identity and customer service	10	3.06	22
Work culture and belonging	8	2.45	75

The highest request topics include communication/explanation, recognition/feedback and teamwork/coordination. Team/colleague-related strengths are prominent in the preserve question (119 records). Some simply identify valued teams/colleagues; do not claim all 119 explicitly describe consistent helpful behaviour. In the fairness question, 73 replies report no current concern. These different experiences remain part of the story.

What n-grams contribute

Bigrams contain two adjacent words; trigrams three. Examples include career growth, regular feedback, knowledge sharing and work life balance. We preserve original word adjacency/negation, do not cross sentences/comments/questions, count a phrase once per record within a question, and filter prompt boilerplate/known name tokens. A minimum support of five is a readability threshold, not statistical significance. English-focused surface forms miss paraphrases and mixed-language variants. N-grams help navigate and inspect the comments; they do not independently validate themes or classify sentiment.

8. Deepen the fairness and cross-team findings

Cross-team execution

Within-team support CAM1 is 298/327 favourable (91.13%); cross-team collaboration CAM2 is 269/327 (82.26%); access to other-team colleagues CAM4 is 262/327 (80.12%). The CAM1/CAM2 favourable difference is 8.87 percentage points.

The paired view keeps the same records together: 45/327 (13.76%) rate CAM1 favourably but CAM2 at 1–3; 16 show the reverse. On the original categories, 90 rate CAM1 higher, 203 the same and 34 lower. Identical-category respondents cannot fall in the discordant group, so the 45 remaining after their exclusion is not an independent robustness result.

The teamwork prompt has 53 request answers discussing roles/processes/accountability/shared goals, 124 communication, and 32 activities; categories overlap. This supports examining ownership, handover information, escalation, response expectations and backup instead of assuming an outing addresses the operational issue. We have not identified which department pair or work step causes a delay; a real workflow baseline is needed.

Fairness of people decisions

Item	question	favourable_n	sometimes_n	unfavourable_n	favourable_pct	mean
FAI1	Performance, recognition and rewards are fair and based on performance.	249	45	33	76.15	4.07
FAI2	Employees have equal opportunities to grow and develop their careers.	267	35	25	81.65	4.24
FAI3	People-related decisions are made consistently by the Leadership team without favoritism or bias.	244	54	29	74.62	4.12
FAI4	I believe workload and responsibilities are distributed fairly within my team.	272	36	19	83.18	4.31
FAI5	I understand how decisions affecting employees are made.	247	56	24	75.54	4.09

Across five fairness items, 137/327 (41.90%) rate at least one at 1–3, 97 have two or more, and 16 rate all five at 1–3. Fifty-one rate both decision consistency FAI3 and understanding decisions FAI5 at 1–3. Since Sometimes is included, none of these is the prevalence of discrimination or unfair treatment.

In the fairness prompt, revised request counts are 67 career/learning, 66 recognition, 64 communication/explanation and 36 workload, with overlap. They point to several different questions: who gets opportunities, how rewards relate to contribution, whether decisions are consistent, why a decision happened and how work is allocated. Seventy-three no-concern replies prevent an overly uniform account.

The priorities overlap but are distinct: 47 of 58 records rating CAM2 at 1–3 also have a fairness item at 1–3; another 90 have a fairness item at 1–3 while CAM2 is favourable. These are descriptive cross-patterns, not a causal pathway.

Related themes and apparent disagreements

Recognition/feedback supports fairness; role clarity/workload/backup supports execution and allocation; voice with visible action supports both. Career opportunity stays inside fairness/progression. High scores and requests can coexist: 126 of the 179 recognition/feedback request records also rate RES4 favourably. The item and the broader topic are imperfect matches, and the prompt explicitly asks for improvement. We do not diagnose hidden dissatisfaction from that combination.

Specific facilities, equipment, respectful-treatment and time-boundary accounts remain on a confidential verification track. Their presence in text can be checked, but the occurrence/severity of reported events has not been independently verified. Broad topic counts are not incident counts.

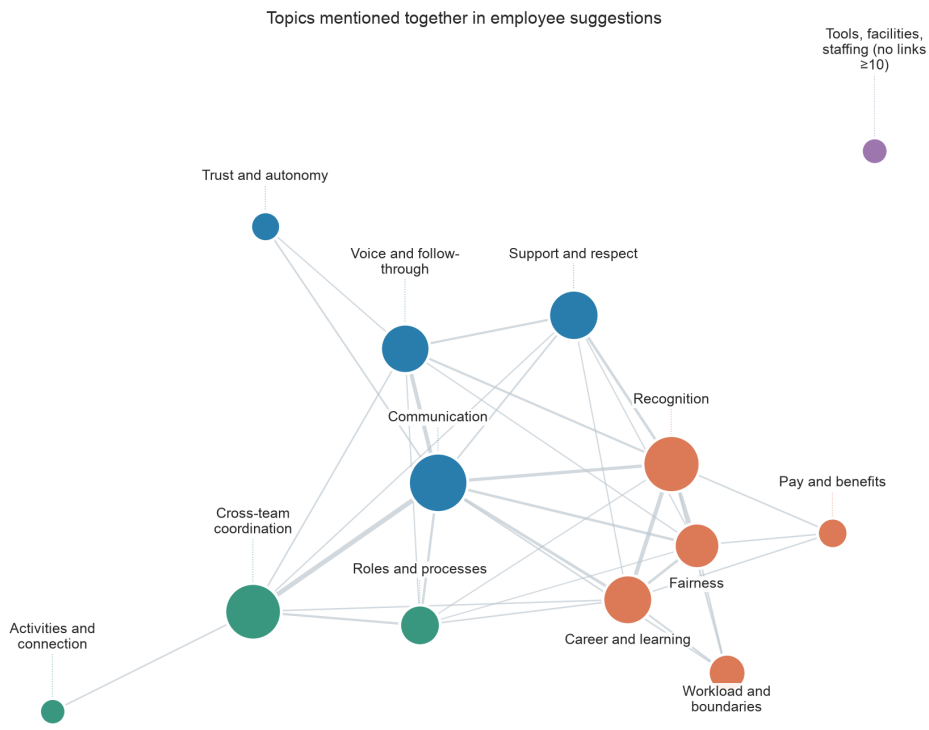

9. What the VOSviewer-style feature adds—and does not add

The primary map uses 1,230 topic-coded suggestion/mixed answers from 305 response records, 13 displayed topics and 34 links supported by at least ten answers. Nodes are topics, not employees. Links count topics mentioned in the same answer; different answers by one record do not by themselves create a link. A record can still contribute several comments.

Node area shows unique contributor-record support, line width shows answer co-mentions, and colors are exploratory custom communities. Association strength divides pair frequency by the product of topic frequencies; the displayed scaled ratio is not a p-value. The force-directed layout and greedy weighted-modularity grouping are local implementations, not native VOSviewer algorithms. Isolates are placed separately; axes and distance from isolated topics have no substantive meaning.

Prompt sensitivity matters: communication/teamwork co-occurs in 98 answers from 93 records, with 85 from the teamwork prompt. Fairness/career co-occurs in 46 answers from 43 records, with 41 from the fairness prompt; excluding it leaves 5. The map cannot serve as independent confirmation of the same prompted coding used to construct it.

The interactive map (*topic_network.html*) provides search, topic focus, threshold filtering, zoom/pan, question-exclusion views, details and SVG export. Static PNG (*topic_cooccurrence_network.png*) and SVG (*topic_cooccurrence_network.svg*), aggregate JSON and local-import map/network files are supplied. No raw comments or names are in the network; nothing was uploaded. Parameter sensitivity is in the notebook and exported tables.

Topic co-mention network (VOSviewer-inspired; prompt-sensitive).

10. Review findings and changes

A second reading by the same assistant covers 568 unique comments: every initial flag and the specified core cohorts. All 104 initial flags were reread; 53 coding/status decisions changed. Original text, original assignments, revised assignments and reasons remain traceable in the notebook. This is not a second person or a blind review.

Topic	Requests before	Requests after	Preserve before	Preserve after
Career growth and learning	143	136	21	18
Fair treatment and decision consistency	113	114	3	3
Support and respectful treatment	138	139	77	77
Pay, incentives and benefits	51	51	10	9

The main corrections remove inferred career development from unspecified opportunities, distinguish no-information/declined answers from ambiguous content, code an explicit short respect request, and avoid forcing unclear provision/retention wording into a particular topic. A mixed answer can preserve something current while proposing improvement.

75 cases still need clarification/context confirmation (ambiguous words, mixed-language interpretation or references); those cases were not simply skipped. Independent human/native-speaker validation is not performed, and no coding-accuracy, saturation or inter-rater reliability statistic is reported. The original five-theme direction, paired rating findings, fairness breadth and 73 no-concern replies remain intact. All major numerical claims are recomputed in the finding-verification register.

11. Proposed implementation pathway: from evidence to action

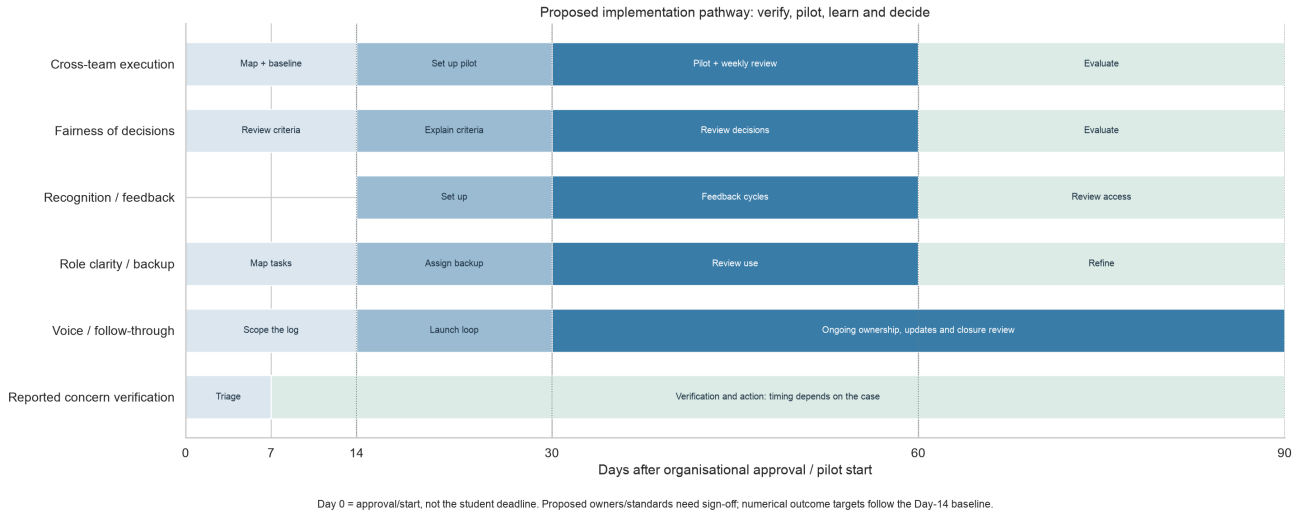

Day 0 is organisational approval/start, not the student deadline. Owners below are proposed roles and must be named by the organisation. Start with one workflow and a defined set of roles; use the first 14 days for the pilot baseline, scope and capacity decisions. This makes the plan feasible and measurable without claiming a survey correlation guarantees an intervention effect.

action_id	workstream	timing_from_approval	proposed_accountable_owner	action	proposed_standard_or_decisio
G0	Governance and scope	Days 0–7	HR lead + executive sponsor	Name an accountable sponsor, choose one cross-functional workflow and pilot roles, confirm resources and employee communication	Baseline and capacity decision b
T-A	Cross-team execution	Days 0–14	Operations/functional head	Map one real handover path, required information, receiving owner, urgency rules, escalation and rework; collect a baseline	Agree workflow-specific response expectations by Day 14
T-B	Cross-team execution	Days 15–30	Operations/functional head	Pilot a simple handover checklist, receiving acknowledgement, shared status and escalation route	Proposed standard: 100% of in-s handover types documented by D
T-C	Cross-team execution	Days 31–60	Operations/functional head	Review delayed/ reworked handovers weekly, fix the recurring obstacle and check that tracking is not adding excessive admin	Proposed pilot standard: ≥95% re field completeness; efficiency targ agreed from the Day-14 baseline
P1-A	Fairness of people decisions	Days 0–14	HR head	Review existing appraisal, progression and reward criteria against how decisions are explained; listen to contrasting employee experiences	Agree what can be clarified now a what requires policy review by Da

action_id	workstream	timing_from_approval	proposed_accountable_owner	action	proposed_standard_or_decisio
P1-B	Fairness of people decisions	Days 15–30	HR head	Publish understandable criteria for pilot roles, brief eligible employees and state how to seek clarification or review	Proposed standard: criteria/expla available for 100% of pilot roles b 30
P1-C	Fairness of people decisions	Days 31–60	HR head	Review a defined set of pilot decisions for documented criteria, explanation and consistent application; correct verified gaps	Proposed standard: every review decision has a documented reaso identified owner; report exception openly in aggregate
P1-R	Recognition and feedback	Days 15–60	Pilot functional managers	Offer each pilot employee a specific feedback conversation and explain non-monetary recognition criteria; review access across roles	Proposed standard: every eligible employee offered a feedback conversation each 30-day cycle
S2	Role clarity, workload and backup	Days 0–30; review to Day 60	Pilot functional head	Document critical task owners and backup, priorities, leave coverage and legitimate escalation needs outside normal hours	Proposed standard: 100% of agre critical tasks have primary, backu escalation owners by Day 30
P2	Voice and visible follow-through	Days 0–30; ongoing	HR lead	Create a simple concern/action log, acknowledge normal concerns, assign an owner and update employees on progress and closure	Proposed normal-concern standa acknowledge within 2 business d owner and next-update date withi sensitive/urgent matters follow ex routes
V1	Verification of specific accounts	Days 0–7; then case-dependent	HR lead / Administration or IT head by issue	Confidentially verify facilities/ equipment and respectful-treatment/time-boundary accounts, triage confirmed issues and route them appropriately	Initial triage in the first week; remediation dates depend on ver urgency, scope and resources

action_id	workstream	timing_from_approval	proposed_accountable_owner	action	proposed_standard_or_decisio
G1	Pilot learning review	Day 30	Executive sponsor	Check pilot readiness, process coverage, workload burden and unresolved verification issues	Proceed only with usable baselin assigned owners and feasible op standards
G2	Experience and process review	Days 60–90	HR lead + executive sponsor	Repeat the selected exact questions, report valid n/category shares and respondent composition, compare operational measures and listen to examples of actual change	Set outcome targets by Day 14; a at Days 60/90; decide scale, ada stop at Day 90

See the compact implementation timeline (*implementation_roadmap.png*).

Proposed 0–90-day implementation timeline.

How success will be measured

Distinguish implementation from experience. A completed checklist or published criterion is an output; better handovers or improved perceptions are outcomes. Both matter. The survey reference values describe the current response pool; collect a comparable pilot baseline instead of applying the whole-company sample value to any selected group.

Experience outcomes and strengths guardrails: the common formula is favourable answers (4–5) / valid answers ×100; retain Sometimes, unfavourable shares and n. Numerical experience targets are agreed from the pilot baseline at Day 14, with follow-up at Days 60/90.

kpi_id	measure	source_item_or_system	current_reference_baseline
O1	Cross-team collaboration	CAM2	269/327 = 82.26% in the supplied response pool

kpi_id	measure	source_item_or_system	current_reference_baseline
O2	Access to colleagues in other teams	CAM4	262/327 = 80.12% in the supplied response pool
O3	Consistency of people decisions	FAI3	244/327 = 74.62% in the supplied response pool
O4	Understanding people decisions	FAI5	247/327 = 75.54% in the supplied response pool
O5	Fair reward/performance decisions	FAI1	249/327 = 76.15% in the supplied response pool
O6	Recognition of contributions	RES4	237/327 = 72.48% in the supplied response pool
O7	Celebrating achievements	CAM5	238/327 = 72.78% in the supplied response pool
O8	Workload fairness	FAI4	272/327 = 83.18% in the supplied response pool
O9	Listening and action on employee feedback	CRE5	261/327 = 79.82% in the supplied response pool
G-Pride	Pride to preserve	PRI1	302/327 = 92.35% in the supplied response pool
G-Support	Within-team support to preserve	CAM1	298/327 = 91.13% in the supplied response pool

Operational process measures: these have no current survey baseline. Establish scope/denominators in the first 14 days and use the following explicitly proposed standards.

kpi_id	measure	definition_and_denominator	proposed_target_or_target_setting_rule
P-Complete	Handover completeness	In-scope handovers with all agreed required fields / all logged in-scope handovers ×100	Proposed pilot standard ≥95% by Day 60; revise if the baseline shows a different bottleneck
P-Time	Handover timeliness	Handovers completed within the agreed workflow/urgency-specific expectation / eligible logged handovers ×100	Define the expectation and improvement target after the first 14-day log; no arbitrary universal shipping deadline
P-Criteria	Criteria access	Pilot roles with accessible current criteria and a review route / all agreed pilot roles ×100	Proposed standard 100% by Day 30
P-Reasons	Decision explanation coverage	Reviewed pilot decisions with documented criterion-based reason and owner / all decisions in the agreed review set ×100	Proposed standard 100%; report and resolve exceptions rather than equating documentation with fairness
P-Feedback	Feedback access	Eligible pilot employees offered a feedback conversation / all eligible pilot employees ×100	Proposed standard 100% offered each 30-day cycle; track completion and voluntary declines separately
P-Backup	Critical-task backup coverage	Agreed critical tasks with primary, backup and escalation owners / all agreed critical tasks ×100	Proposed standard 100% by Day 30
P-Ack	Concern acknowledgement	Normal concerns acknowledged within 2 business days / all eligible normal concerns ×100	Proposed operating expectation: acknowledge each normal concern within 2 business days; distinguish exceptions/urgent routes

kpi_id	measure	definition_and_denominator	proposed_target_or_target_setting_rule
P-Owner	Concern ownership and next update	Normal concerns with owner and next-update date within 5 business days / all eligible normal concerns ×100	Proposed operating expectation: owner and update date within 5 business days; not a resolution promise

Proposed process standards (such as all pilot roles having criteria access or ≥95% handover-field completeness) are explicit pilot design choices, not values inferred from this survey or commitments already approved. Normal concern acknowledgement and ownership standards do not promise resolution in five days. Workflow urgency rules need operational input; urgent/sensitive matters retain existing routes.

Numerical improvement targets for experience outcomes are agreed at Day 14 using the pilot baseline, population, uncertainty and resources. Do not invent a five-point increase, turnover saving or ROI merely to make the roadmap look precise. Maintain a small main panel, with the full KPI dictionary as reference. Repeat exact question wording/options, show valid n, response participation and composition, and retain Sometimes separately.

gate	required_decision	interpretation_rule
Day 0	Approve scope, name accountable people, confirm capacity and communication	Pilot cannot start merely because this report exists
Day 14	Approve baseline, denominators, exact outcome questions, workflow expectations and numerical outcome targets	Targets are chosen with context, not fabricated from correlations or qualitative counts
Day 30	Check process readiness and owner coverage; adapt the pilot if burden or gaps are excessive	Record reasons for continue/adapt decisions
Day 60	Review operational progress and employee evidence; resolve observed implementation gaps	Retain contrary and no-concern accounts; report nonresponse and composition
Day 90	Decide scale, adapt or stop using process, experience, resource and guardrail evidence	Do not attribute all change to the pilot without a defensible comparison

A relevant comparison or staged rollout may help interpretation if feasible. Before/after differences alone cannot isolate the pilot's effect. At Day 90 decide scale, adapt or stop using process evidence, employee experience, resource use and the pride/team-support guardrails together.

12. Tools and why we chose the methods

Python and Jupyter organise reproducible analysis in one notebook. pandas/openpyxl load and reshape Excel data; NumPy performs numerical calculations; SciPy supports rank tests, FDR adjustment, correlations and network optimisation; Matplotlib/seaborn draw the charts. Standard-library helpers manage hashing, counts and exports. Plain offline HTML/SVG/JavaScript implements the network controls. Dependencies are pinned through uv.lock. No additional model API, automatic sentiment service, scikit-learn model or native VOSviewer execution is used.

Method	Question it answers	Choice made	Limit
Workbook/ codebook audit	Identify source rows, question wording, labels and missingness	Use the supplied master and retain a documented transformation trail	Does not verify unique employee identities or why raw/master counts differ
Counts, distributions and favourable shares	Describe the base before aggregates	Primary reporting evidence; valid-answer denominators always explicit	Favourable is 4–5; Sometimes is not neutral; a percentage is not a diagnosis
Working means and block summaries	Summarise experience beside the distribution	Equal category spacing and item weights are stated assumptions	Custom CULTURE_MEAN is descriptive, not a validated/official engagement index

Method	Question it answers	Choice made	Limit
Cronbach alpha / item–total checks	Inspect item coherence within the supplied blocks	Diagnostic, not automatic item removal	Does not establish one factor, validity, distinct dimensions or a halo effect
Spearman correlations	Explore which ratings move together	Rank association suits the ordered coding and exploratory question	No causal/independent-driver interpretation; avoid part–whole overlap
Kruskal–Wallis and BY adjustment	Explore relevant group differences	11 overlapping full/sensitivity comparisons adjusted together	Assumptions remain; omnibus differences do not identify pairwise causes
Response-style sensitivity	Check dependence on identical-category respondents	Keep all records primary; show labelled exclusions	Exclusion is not a correction to a known truth; paired discordance cannot include straight-liners
HR counts and Cramér's V	Describe the one HR priority selected	Recompute from master; inspect expected cells before inference	Sparse-table asymptotic p-values withheld; no unsupported department-effect claim
Codebook-based thematic content analysis	Understand specific strengths, concerns and suggested changes	15 explicit overlapping topic labels plus separate stance/status; original and revised ledger retained	AI-assisted and interpretive; not independently human-validated or reflexive TA
Exact bigrams/ trigrams	Find recurring phrases to navigate comments	Original token adjacency, negation and unique-record support; prompt/ name filtering	Not a theme/sentiment classifier or proof of independent experiences; English-focused
Paired item / rating–comment profiles	Connect what the same records say in different forms	Describe distributions, matches and differences with clear denominators	Positive ratings and improvement requests need not contradict each other
VOSviewer-inspired topic network	Explore same-answer topic connections	Full-count pairs, association normalization, custom layout/ grouping and prompt sensitivity	Not native VOSviewer algorithms, a causal map, an employee network or independent validation
Assistant re-review / source verification	Tighten coding boundaries and check important claims	568 comments reread; 53 changes; calculated facts recomputed; original decisions preserved	No inter-rater reliability, coding-accuracy estimate or confirmation that accounts occurred
0–90-day pilot roadmap / KPI dictionary	Turn findings into owned, measurable proposals	Separate observed survey references from unknown operational baselines; define decision gates	Standards are proposals; approval, capacity and numerical outcome targets are not invented

Fuzzy analysis was assessed rather than added for appearance. A frequency-based equal-weight construction scored 1–5 exactly equals the ordinary mean for these complete data; that calculation adds no information. A substantive calibrated fuzzy model, factor model, employee clustering or causal/attrition model was not justified by the current decision need and available outcomes. This is not a claim that those methods are universally invalid.

Method references used for definitions and fit include CIPD people analytics, Civil Service survey methodology, SciPy BY adjustment, Framework Method, Braun & Clarke's method distinctions, NLTK phrase documentation and official VOSviewer conventions. Practitioner/forum material informed practical questions, not statistical validation. The notebook retains the fuller research trail.

13. Claims we can make, and claims to avoid

We can describe how these records answered, identify relative strengths/gaps, show within-record and group patterns, report contextual coded topics with limitations, and propose evidence-linked improvements. We cannot claim workforce representativeness, proven causes of engagement/turnover, official Trust Index/eNPS results,

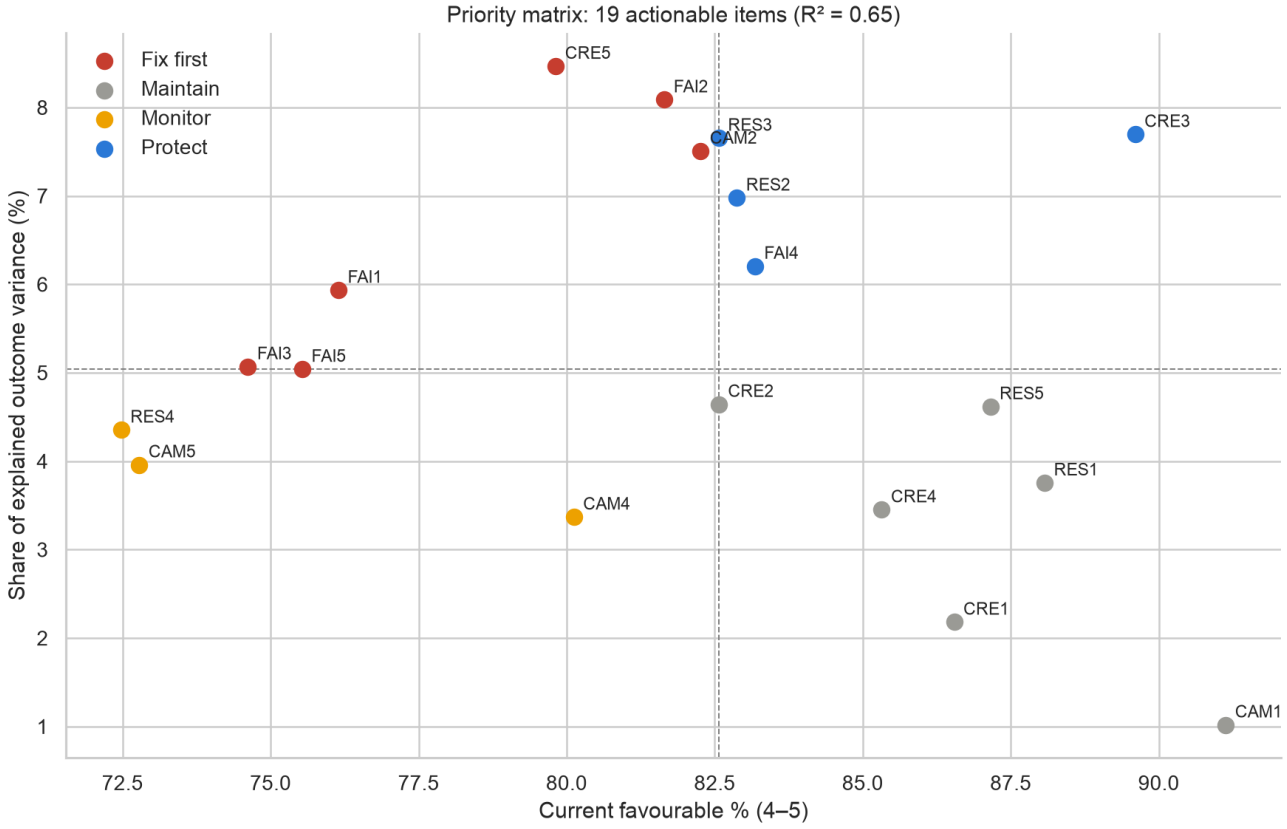

independent qualitative validation, verified misconduct, incident prevalence, automatic department blame or guaranteed intervention effects/ROI.

14. Output map and next work

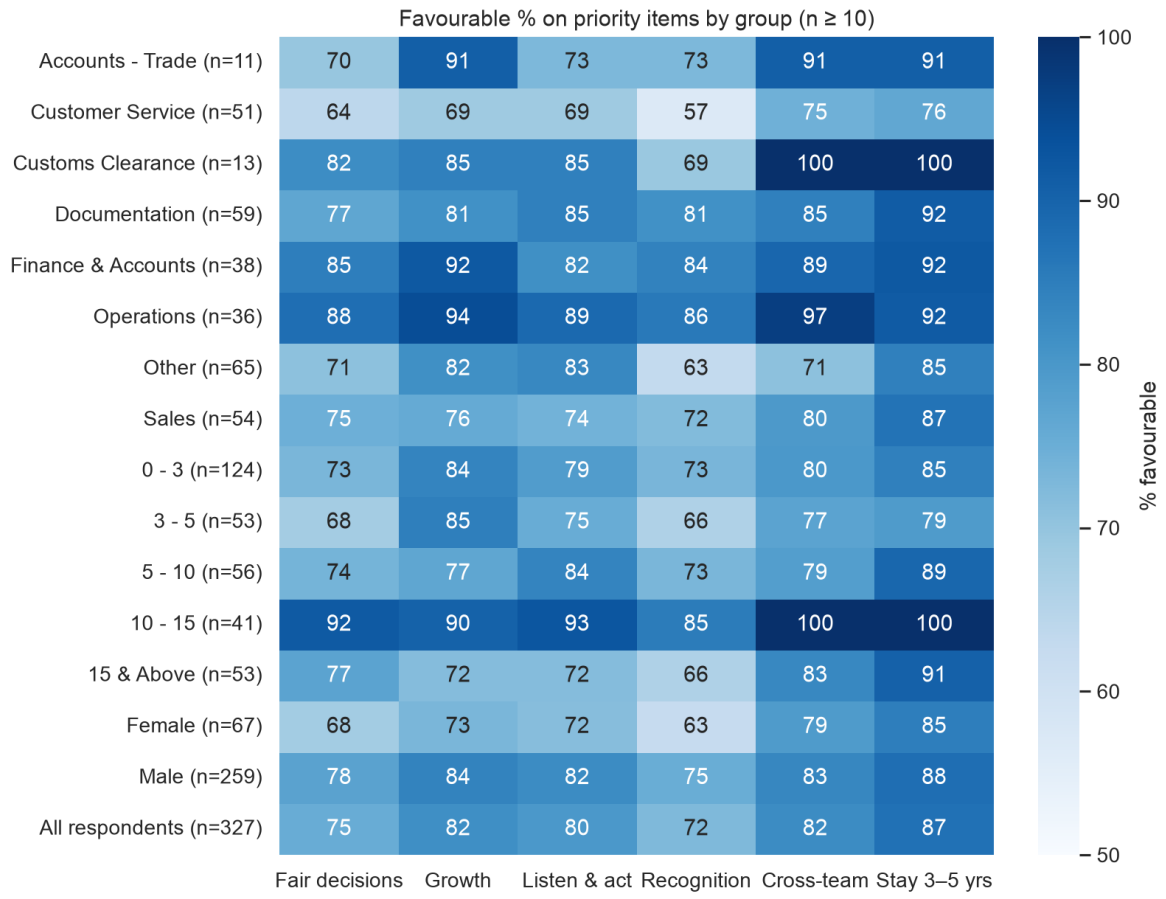

The notebook (*00_data_understanding_eda.ipynb*) is the analytical source. The short final synthesis (*FINAL_ANALYSIS_SYNTHESIS.md*) is a concise companion. The roadmap CSV (*implementation_roadmap_0_90_days.csv*), KPI dictionary (*roadmap_kpi_dictionary.csv*), decision gates (*roadmap_decision_gates.csv*), review before/after table (*coding_review_before_after.csv*) and finding-verification register (*finding_verification_register.csv*) support review. Existing figures and tables are regenerated from current assignments, including the network.

The requested assistant review and practical roadmap draft are complete. Genuine independent review, clarification of ambiguous cases, verification of specific accounts and organisational approval remain honestly labelled. The executive PowerPoint and dashboard now follow the Step 7 priority order (section 15). No additional statistical method is required unless it resolves a specific remaining decision question.

15. Prioritisation check (Step 7, 30 October 2026)

Priority matrix: link to outcomes vs favourable share, 19 actionable questions.

Favourable % on priority questions by group (n ≥ 10).

Relative weights on 19 actionable items explain 65% of the variation in an outcome built from recommend, satisfaction and intention to stay (pride and belonging excluded as near-outcomes). Fairness carries 31% of the dimension-level link. Fix-first items (above-median link, below-median score): CRE5, FAI2, CAM2, FAI1, FAI3, FAI5. The ranking is unchanged without straight-liners (ρ = 1.00); among the 100 anonymous respondents it shifts (ρ = 0.59): recognition rises and cross-team drops.

theme	Score	Outcome link	HR choice	'One change'	Strong (of 4)
Fair, explainable people decisions & growth	Strong	Strong	Strong	Strong	4
Leaders listen and visibly act	Strong	Strong	Strong	Strong	4
Recognition of contributions	Strong	Weak	Medium	Strong	2
Cross-team collaboration	Medium	Strong	—	Weak	1
Support when problems arise	Weak	Weak	Strong	Medium	1
Workload & role clarity	Weak	Medium	Weak	Strong	1
Pay, benefits & facilities	—	—	Strong	Medium	1

Revised order: Priority 1 is fair, explainable people decisions and growth, with recognition inside it. Priority 2 is leaders listening and visibly acting. Cross-team handovers become a targeted pilot starting in Customer Service. Pay, benefits and facilities go to the annual review.

Named vs anonymous: 91.6% of named and 78.0% of anonymous respondents intend to stay 3–5 years. This is consistent with, not proof of, more guarded answers when named; report both and drop the name field next time.

Associations are not causes. Grading thresholds were fixed before reading the result. Tables: priority_matrix.csv, priority_triangulation.csv, hr_priority_counts.csv, one_change_topics.csv, named_vs_anonymous.csv, group_hotspots.csv, driver_model_summary.csv.

Appendix A — Evidence tables

A1. All 30 rating questions

Code	Question	Mean	Fav %	Sometimes %	Unfav %	Top box %	no straight-liners %
RES4	My efforts and contributions are appreciated and recognised	4.07	72.5	17.1	10.4	46.5	67.4
CAM5	People here celebrate each other's successes and achievements.	4.13	72.8	20.8	6.4	48.6	67.8
FAI3	People-related decisions are made consistently by the Leadership team without favoritism or bias.	4.12	74.6	16.5	8.9	48.3	70.0
FAI5	I understand how decisions affecting employees are made.	4.09	75.5	17.1	7.3	42.8	71.1
FAI1	Performance, recognition and rewards are fair and based on performance.	4.07	76.1	13.8	10.1	44.0	71.8
CRE5	Leaders are willing to listen to employee feedback and act on it.	4.19	79.8	11.9	8.3	50.5	76.2
CAM4	I can rely on colleagues from other teams when I need their support.	4.23	80.1	14.1	5.8	50.2	76.6
FAI2	Employees have equal opportunities to grow and develop their careers.	4.24	81.7	10.7	7.6	52.0	78.4
CAM2	Teams across the organization work well together.	4.29	82.3	12.5	5.2	53.8	79.1
RES3	I feel comfortable sharing my views or concerns at work	4.27	82.6	9.8	7.6	55.0	79.5
CRE2	Our leaders do what they say they will do.	4.30	82.6	11.9	5.5	55.4	79.5
RES2	I receive the resources, support and recognition I need to do my job well.	4.35	82.9	11.9	5.2	58.1	79.9
FAI4	I believe workload and responsibilities are distributed fairly within my team.	4.31	83.2	11.0	5.8	55.7	80.2
CRE4	Senior leaders communicate important changes in a timely manner	4.34	85.3	9.5	5.2	55.4	82.8
CRE1	Communication from senior leadership is open and honest.	4.40	86.5	8.0	5.5	61.2	84.2
OVR4	I am satisfied with the overall employee experience at Safewater Lines.	4.39	87.2	8.0	4.9	58.1	85.0
RES5	I am treated with dignity and respect, regardless of my role or position.	4.41	87.2	8.9	4.0	59.3	85.0
PRI3	I see myself continuing to work here over the next 3 – 5 years.	4.50	87.5	7.0	5.5	69.1	85.3
RES1	My manager genuinely supports my performance, development and well-being.	4.49	88.1	7.0	4.9	66.7	86.1
OVR5	I believe Safewater Lines provides a workplace where I can do meaningful and fulfilling work.	4.51	89.3	7.6	3.1	66.7	87.5
OVR1	I would recommend this organization as a great place to work.	4.52	89.3	7.6	3.1	66.7	87.5
CRE3	I have confidence in the direction of the organization.	4.53	89.6	8.9	1.5	64.5	87.9
PRI5	I feel motivated to contribute beyond my basic job responsibilities when the business needs it.	4.54	90.2	7.3	2.4	66.7	88.6
PRI4	I feel that our organization is making a positive impact on our customers and business.	4.55	90.2	7.0	2.8	67.9	88.6
CAM3	I feel that I belong to this organization	4.57	90.2	6.4	3.4	70.3	88.6

Code	Question	Mean	Fav %	Sometimes %	Unfav %	Top box %	no straight-liners %
OVR2	I have opportunities to learn, grow and build my career here.	4.49	90.5	4.9	4.6	63.9	89.0
OVR3	I have what I need to perform at my best and contribute to business success.	4.50	90.8	7.0	2.1	61.8	89.4
CAM1	People in my team genuinely support and help one another	4.55	91.1	6.1	2.8	67.0	89.7
PRI1	I am proud to tell others that I work for Safewater Lines Group	4.66	92.4	6.1	1.5	75.8	91.2
PRI2	I understand how my work contributes to the success of the business.	4.67	95.7	3.4	0.9	71.9	95.2

A2. Priority matrix (relative weights, 500 bootstraps)

Outcome = mean of OVR1, OVR4, PRI3. R^2 = 0.65 (all), 0.61 (no straight-liners), 0.77 (anonymous only). Dimension shares: CRE 24.5%, RES 26.5%, FAI 30.7%, CAM 18.3%.

Item	Fav %	Importance %	95% CI low	95% CI high	P(top 5)	No straight-liners	Anonymous only	Quadrant
CRE5	79.8	8.5	5.0	13.5	0.71	9.2	7.5	Fix first
FAI2	81.7	8.1	4.9	11.9	0.75	8.6	8.2	Fix first
CRE3	89.6	7.7	4.0	12.2	0.61	7.8	6.9	Protect
RES3	82.6	7.7	3.4	13.0	0.56	8.1	5.9	Protect
CAM2	82.3	7.5	4.0	11.5	0.64	7.8	5.4	Fix first
RES2	82.9	7.0	4.0	10.6	0.51	7.2	10.3	Protect
FAI4	83.2	6.2	3.3	9.8	0.37	6.3	3.7	Protect
FAI1	76.1	5.9	3.4	9.6	0.27	6.0	7.1	Fix first
FAI3	74.6	5.1	2.8	8.5	0.14	5.0	3.5	Fix first
FAI5	75.5	5.0	2.4	8.8	0.17	4.9	4.0	Fix first
CRE2	82.6	4.6	2.6	7.3	0.07	4.5	4.6	Maintain
RES5	87.2	4.6	2.4	7.6	0.09	4.4	1.9	Maintain
RES4	72.5	4.4	2.6	6.7	0.03	4.2	8.9	Monitor
CAM5	72.8	4.0	2.2	7.0	0.04	3.7	8.1	Monitor
RES1	88.1	3.8	2.2	6.4	0.03	3.5	3.3	Maintain
CRE4	85.3	3.5	2.1	5.8	0.01	3.1	2.2	Maintain

CRE1	86.5	2.2	1.4	3.9	0.00	1.8	2.1	Maintain
CAM1	91.1	1.0	0.7	2.4	0.00	0.9	1.6	Maintain

A3. Four-source evidence check

Theme	Items	Lowest rank	Score	Max P(top 5)	Outcome link	HR %	HR grade	One change (people)	One-change grade
Fair, explainable people decisions & growth	FAI1, FAI2, FAI3, FAI5	3	Strong	0.75	Strong	15.6	Strong	56	Strong
Leaders listen and visibly act	CRE5, RES3	6	Strong	0.71	Strong	24.5	Strong	97	Strong

Theme	Items	Lowest rank	Score	Max P(top 5)	Outcome link	HR %	HR grade	One change (people)	One-change grade
Recognition of contributions	RES4, CAM5	1	Strong	0.04	Weak	9.2	Medium	60	Strong
Cross-team collaboration	CAM2, CAM4	7	Medium	0.64	Strong	—	—	16	Weak
Support when problems arise	RES1, RES5	16	Weak	0.09	Weak	19.6	Strong	36	Medium
Workload & role clarity	FAI4	13	Weak	0.37	Medium	6.1	Weak	63	Strong
Pay, benefits & facilities	—	—	—	—	—	15.6	Strong	37	Medium

A4. Named vs anonymous respondents

Group	n	Culture mean	Stay 3–5 yrs %	Recommend %	Fix-first items %	Straight-liners %
All	327	4.35	87.5	89.3	78.3	16.5
Named	227	4.42	91.6	92.5	81.6	17.2
Anonymous	100	4.20	78.0	82.0	70.8	15.0

A5. Group hotspots (favourable %, n ≥ 10)

Type	Group	n	Fair decisions	Growth	Listen & act	Recognition	Cross-team	Stay 3–5 yrs
Department	Accounts - Trade	11	69.7	90.9	72.7	72.7	90.9	90.9
Department	Customer Service	51	64.1	68.6	68.6	56.9	74.5	76.5
Department	Customs Clearance	13	82.1	84.6	84.6	69.2	100.0	100.0
Department	Documentation	59	76.8	81.4	84.7	81.4	84.7	91.5
Department	Finance & Accounts	38	85.1	92.1	81.6	84.2	89.5	92.1
Department	Operations	36	88.0	94.4	88.9	86.1	97.2	91.7
Department	Other	65	70.8	81.5	83.1	63.1	70.8	84.6
Department	Sales	54	74.7	75.9	74.1	72.2	79.6	87.0
Tenure	0 - 3	124	73.1	83.9	79.0	73.4	79.8	84.7
Tenure	3 - 5	53	67.9	84.9	75.5	66.0	77.4	79.2
Tenure	5 - 10	56	73.8	76.8	83.9	73.2	78.6	89.3
Tenure	10 - 15	41	91.9	90.2	92.7	85.4	100.0	100.0
Tenure	15 & Above	53	77.4	71.7	71.7	66.0	83.0	90.6
Gender	Female	67	68.2	73.1	71.6	62.7	79.1	85.1
Gender	Male	259	77.6	84.2	82.2	75.3	83.4	88.0
All	All respondents	327	75.4	81.7	79.8	72.5	82.3	87.5

A6. HR forced choice

If HR could do one thing better…	People	%
Listening to employees and their concerns	67	20.5
Help employees progress in their careers	51	15.6
Improve employee benefits and facilities	51	15.6

If HR could do one thing better…	People	%
Help resolve employee problems	35	10.7
Recognising and appreciating good work	30	9.2
Supporting employees when they need help	29	8.9
Making rules and processes simple	20	6.1
Being available and easy to approach	18	5.5
Employee activities and engagement	13	4.0
Keeping employees informed	13	4.0

A7. Comment topics

Open “one change” question (people raising each topic):

Topic	People	% of answers
Communication and decision explanations	69	21.9
Recognition and performance feedback	60	19.0
Career growth and learning	47	14.9
Employee voice and follow-through	41	13.0
Workload, boundaries and flexibility	38	12.1
Support and respectful treatment	36	11.4
Role clarity and work processes	30	9.5
Facilities, tools and staffing	21	6.7
Teamwork and cross-team coordination	16	5.1
Pay, incentives and benefits	16	5.1
Fair treatment and decision consistency	11	3.5
Trust, integrity and autonomy	9	2.9
Activities and social connection	9	2.9
Business identity and customer service	6	1.9
Work culture and belonging	3	1.0

All six open questions (requests and strengths, unique people):

Topic	Request (people)	Request % of 327	Preserve (people)
Communication and decision explanations	194	59.3	12
Recognition and performance feedback	179	54.7	4
Teamwork and cross-team coordination	176	53.8	119
Support and respectful treatment	139	42.5	77
Career growth and learning	136	41.6	18
Employee voice and follow-through	134	41.0	10
Fair treatment and decision consistency	114	34.9	3
Role clarity and work processes	91	27.8	7

Topic	Request (people)	Request % of 327	Preserve (people)
Workload, boundaries and flexibility	78	23.9	6
Pay, incentives and benefits	51	15.6	9
Trust, integrity and autonomy	49	15.0	61
Facilities, tools and staffing	39	11.9	0
Activities and social connection	38	11.6	4
Business identity and customer service	10	3.1	22
Work culture and belonging	8	2.4	75

A8. Finding verification register

Finding	Recomputed	Check
master_records	327	Recomputed/source-traced; qualitative counts remain interpretive
rating_answers	9810	Recomputed/source-traced; qualitative counts remain interpretive
CAM1_favourable_n	298	Recomputed/source-traced; qualitative counts remain interpretive

Appendix B — Roadmap, KPIs and decision gates

B1. Implementation roadmap (0–90 days)

IDs: P1 = fair decisions and growth; P1-R = recognition; P2 = listen and act; T = targeted cross-team fix; S2 = role clarity; G = governance; V = verification.

ID	Workstream	Timing	Accountable	Action	Standard / gate
G0	Governance and scope	Days 0–7	HR lead + executive sponsor	Name an accountable sponsor, choose one cross-functional workflow and pilot roles, confirm resources and employee communication	Baseline and capacity decision by Day 7
T-A	Cross-team execution	Days 0–14	Operations/ functional head	Map one real handover path, required information, receiving owner, urgency rules, escalation and rework; collect a baseline	Agree workflow-specific response expectations by Day 14
T-B	Cross-team execution	Days 15–30	Operations/ functional head	Pilot a simple handover checklist, receiving acknowledgement, shared status and escalation route	Proposed standard: 100% of in-scope handover types documented by Day 30
T-C	Cross-team execution	Days 31–60	Operations/ functional head	Review delayed/reworked handovers weekly, fix the recurring obstacle and check that tracking is not adding excessive admin	Proposed pilot standard: ≥95% required-field completeness; efficiency target agreed from the Day-14 baseline
P1-A	Fairness of people decisions	Days 0–14	HR head	Review existing appraisal, progression and reward criteria against how decisions are explained; listen to contrasting employee experiences	Agree what can be clarified now and what requires policy review by Day 14
P1-B	Fairness of people decisions	Days 15–30	HR head	Publish understandable criteria for pilot roles, brief eligible employees and state how to seek clarification or review	Proposed standard: criteria/ explanation available for 100% of pilot roles by Day 30
P1-C	Fairness of people decisions	Days 31–60	HR head	Review a defined set of pilot decisions for documented criteria, explanation and consistent application; correct verified gaps	Proposed standard: every reviewed decision has a documented reason and identified owner; report exceptions openly in aggregate
P1-R	Recognition and feedback	Days 15–60	Pilot functional managers	Offer each pilot employee a specific feedback conversation and explain non-monetary recognition criteria; review access across roles	Proposed standard: every eligible pilot employee offered a feedback conversation each 30-day cycle
S2	Role clarity, workload and backup	Days 0–30; review to Day 60	Pilot functional head	Document critical task owners and backup, priorities, leave coverage and legitimate escalation needs outside normal hours	Proposed standard: 100% of agreed critical tasks have primary, backup and escalation owners by Day 30
P2	Voice and visible follow-through	Days 0–30; ongoing	HR lead	Create a simple concern/action log, acknowledge normal concerns, assign an owner and update employees on progress and closure	Proposed normal-concern standards: acknowledge within 2 business days; owner and next-update date within 5; sensitive/ urgent matters follow existing routes
V1	Verification of specific accounts	Days 0–7; then case-dependent	HR lead / Administration or IT head by issue	Confidentially verify facilities/equipment and respectful-treatment/time-boundary accounts, triage confirmed issues and route them appropriately	Initial triage in the first week; remediation dates depend on verified urgency, scope and resources
G1	Pilot learning review	Day 30	Executive sponsor	Check pilot readiness, process coverage, workload burden and unresolved verification issues	Proceed only with usable baseline, assigned owners and feasible operating standards

ID	Workstream	Timing	Accountable	Action	Standard / gate
G2	Experience and process review	Days 60–90	HR lead + executive sponsor	Repeat the selected exact questions, report valid n/category shares and respondent composition, compare operational measures and listen to examples of actual change	Set outcome targets by Day 14; assess at Days 60/90; decide scale, adapt or stop at Day 90

B2. KPI dictionary

ID	Workstream	Measure	Source	Current reference	Target rule
O1	T	Cross-team collaboration	CAM2	269/327 = 82.26% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O2	T	Access to colleagues in other teams	CAM4	262/327 = 80.12% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O3	P1	Consistency of people decisions	FAI3	244/327 = 74.62% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O4	P1	Understanding people decisions	FAI5	247/327 = 75.54% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O5	P1	Fair reward/ performance decisions	FAI1	249/327 = 76.15% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O6	P1-R	Recognition of contributions	RES4	237/327 = 72.48% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O7	P1-R	Celebrating achievements	CAM5	238/327 = 72.78% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O8	S2	Workload fairness	FAI4	272/327 = 83.18% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
O9	P2	Listening and action on employee feedback	CRE5	261/327 = 79.82% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
G-Pride	Guardrail	Pride to preserve	PRI1	302/327 = 92.35% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
G-Support	Guardrail	Within-team support to preserve	CAM1	298/327 = 91.13% in the supplied response pool	Proposed direction: improve priority-item distributions; investigate material decline on strengths. Numerical outcome targets agreed at Day 14 with sample/composition context
P-Complete	T	Handover completeness	Operational log	Not available in the survey	Proposed pilot standard ≥95% by Day 60; revise if the baseline shows a different bottleneck

ID	Workstream	Measure	Source	Current reference	Target rule
P-Time	T	Handover timeliness	Operational log	Not available in the survey	Define the expectation and improvement target after the first 14-day log; no arbitrary universal shipping deadline
P-Criteria	P1	Criteria access	Operational log	Not available in the survey	Proposed standard 100% by Day 30
P-Reasons	P1	Decision explanation coverage	Operational log	Not available in the survey	Proposed standard 100%; report and resolve exceptions rather than equating documentation with fairness
P-Feedback	P1-R	Feedback access	Operational log	Not available in the survey	Proposed standard 100% offered each 30-day cycle; track completion and voluntary declines separately
P-Backup	S2	Critical-task backup coverage	Operational log	Not available in the survey	Proposed standard 100% by Day 30
P-Ack	P2	Concern acknowledgement	Operational log	Not available in the survey	Proposed operating expectation: acknowledge each normal concern within 2 business days; distinguish exceptions/urgent routes
P-Owner	P2	Concern ownership and next update	Operational log	Not available in the survey	Proposed operating expectation: owner and update date within 5 business days; not a resolution promise

B3. Decision gates

Gate	Decision	Interpretation rule
Day 0	Approve scope, name accountable people, confirm capacity and communication	Pilot cannot start merely because this report exists
Day 14	Approve baseline, denominators, exact outcome questions, workflow expectations and numerical outcome targets	Targets are chosen with context, not fabricated from correlations or qualitative counts
Day 30	Check process readiness and owner coverage; adapt the pilot if burden or gaps are excessive	Record reasons for continue/adapt decisions
Day 60	Review operational progress and employee evidence; resolve observed implementation gaps	Retain contrary and no-concern accounts; report nonresponse and composition
Day 90	Decide scale, adapt or stop using process, experience, resource and guardrail evidence	Do not attribute all change to the pilot without a defensible comparison

Appendix C — Questionnaire

C1. Question codebook

Code	Block	Question
location	demographic	Your Workplace Location
designation	demographic	Your Current Designation
department	demographic	Your Current Department
tenure	demographic	Your years of Service
gender	demographic	Gender
CRE1	CREDIBILITY	Communication from senior leadership is open and honest.
CRE2	CREDIBILITY	Our leaders do what they say they will do.
CRE3	CREDIBILITY	I have confidence in the direction of the organization.
CRE4	CREDIBILITY	Senior leaders communicate important changes in a timely manner
CRE5	CREDIBILITY	Leaders are willing to listen to employee feedback and act on it.
RES1	RESPECT	My manager genuinely supports my performance, development and well-being.
RES2	RESPECT	I receive the resources, support and recognition I need to do my job well.
RES3	RESPECT	I feel comfortable sharing my views or concerns at work
RES4	RESPECT	My efforts and contributions are appreciated and recognised
RES5	RESPECT	I am treated with dignity and respect, regardless of my role or position.
FAI1	FAIRNESS	Performance, recognition and rewards are fair and based on performance.
FAI2	FAIRNESS	Employees have equal opportunities to grow and develop their careers.
FAI3	FAIRNESS	People-related decisions are made consistently by the Leadership team without favoritism or bias.
FAI4	FAIRNESS	I believe workload and responsibilities are distributed fairly within my team.
FAI5	FAIRNESS	I understand how decisions affecting employees are made.
PRI1	PRIDE	I am proud to tell others that I work for Safewater Lines Group
PRI2	PRIDE	I understand how my work contributes to the success of the business.
PRI3	PRIDE	I see myself continuing to work here over the next 3 – 5 years.
PRI4	PRIDE	I feel that our organization is making a positive impact on our customers and business.
PRI5	PRIDE	I feel motivated to contribute beyond my basic job responsibilities when the business needs it.
CAM1	CAMARADERIE	People in my team genuinely support and help one another
CAM2	CAMARADERIE	Teams across the organization work well together.
CAM3	CAMARADERIE	I feel that I belong to this organization
CAM4	CAMARADERIE	I can rely on colleagues from other teams when I need their support.
CAM5	CAMARADERIE	People here celebrate each other's successes and achievements.
OVR1	OVERALL EMPLOYEE EXPERIENCE	I would recommend this organization as a great place to work.
OVR2	OVERALL EMPLOYEE EXPERIENCE	I have opportunities to learn, grow and build my career here.
OVR3	OVERALL EMPLOYEE EXPERIENCE	I have what I need to perform at my best and contribute to business success.

Code	Block	Question
OVR4	OVERALL EMPLOYEE EXPERIENCE	I am satisfied with the overall employee experience at Safewater Lines.
OVR5	OVERALL EMPLOYEE EXPERIENCE	I believe Safewater Lines provides a workplace where I can do meaningful and fulfilling work.
oe_leaders_trust	open-ended	What is one thing our senior leaders could do better to build greater trust among employees?
oe_feel_valued	open-ended	What is one thing we could do to make you feel more valued, supported or respected?
oe_fairness_concern	open-ended	Where do you see the biggest concern about fairness in the organization?
oe_value_most	open-ended	What is the one thing about our organization that you value most and would never want us to lose?
oe_teamwork	open-ended	What is one thing we could do to improve teamwork and collaboration?
oe_one_change	open-ended	If you could make one change to improve the employee experience, what would it be?
hr_priority	single-choice	What is one thing you would like HR to do better?

Appendix D — Terms, variables, mappings and lineage

A. Essential terms and interpretation

Term	Meaning and use in this project
CRE / RES / FAI / PRI / CAM / OVR	Credibility / Respect / Fairness / Pride / Camaraderie / Overall Employee Experience; supplied question blocks
OE / HR	Open-ended response / Human Resources
AM / TL / R&R	Assistant Manager / Team Leader / Rewards and Recognition
Culture summary	Our descriptive 25-item mean; not a validated or official culture summary
Favourable / unfavourable	Scores 4–5 / 1–2; show the valid-answer denominator and retain Sometimes separately
Percentage points	Subtract percentages directly; 80% to 85% is +5 percentage points
Reliability / validity	Consistency of a measure / evidence supporting an interpretation and intended use; one does not prove the other
Alpha	Internal consistency statistic under assumptions; not a universal pass/fail test or proof of one factor
Spearman rho	Rank association; no causal or independent-effect interpretation
p-value	Under the specified null model and assumptions, probability of a test statistic at least as extreme as observed; not the probability the null is true or that chance caused the result
BY-adjusted p-value	Adjustment controlling false discovery rate under general dependence, when the input tests are valid
Kruskal–Wallis	Independent-group rank comparison; does not identify which groups differ; median interpretation needs appropriate distributional assumptions
Cramér's V	Descriptive categorical association; sparse tables and sample size affect interpretation
Ceiling effect / straight-lining	Concentration at the top category / one category used throughout; do not automatically discard responses
eNPS	A recommendation measure using an NPS scoring protocol; not computable from our 1–5 OVR1 item as standard eNPS

Definitions and methodological decisions are expanded in Step 1; linked research sources and the final methodology table provide references.

B. Variables created in this notebook (`data/processed/survey_clean.csv`)

Column	Type	Definition
`CRE1` … `OVR5`	int 1–5	Likert answers converted to numbers (see C.1)
`CRE`, `RES`, `FAI`, `PRI`, `CAM`, `OVR`	float 1–5	Dimension scores: mean of 5 items
`CULTURE_MEAN`	float 1–5	Mean of 25 items (all dimensions except OVR)
`fav_pct`	float 0–100	Respondent's % of the 30 answers that are 4 or 5
`level`	category	Designation grouped into 7 levels (see C.2)
`region`	category	City grouped into 5 regions (see C.3)
`dept_group`	category	Department, with those under 10 respondents merged into *Other*

Column	Type	Definition
`hr_theme`	category	HR-priority option grouped into 8 themes (see C.4)
`straightliner`	bool	Same answer to all 30 items
`gave_name`	bool	Filled in the optional name field (the name itself is dropped)

The dedicated `full_name` field is removed from `survey_clean.csv`. Free-text comments can still contain identifiers, so the processed survey remains confidential. Presentation exports use aggregates and contain no raw comments. The codebook retains field definitions, never respondent name values.

C. Mappings used

C.1 Likert scale

Raw label(s)	Score
Almost never · Almost Never	1
Rarely	2
Sometimes	3
Usually · Often (Hindi form)	4
Almost always · Almost Always · Always (Malayalam form)	5

C.2 Level (keyword rules, checked in this order)

Level	Designations containing
6 Sr Leadership	chief, general manager, head of
4 AM / TL	assistant manager, team leader, supervisor
5 Manager+	manager (Manager, Sr/Deputy/Branch/Area/Project Manager…)
3 Sr Executive	senior executive
2 Executive	executive
1 Junior / Support	junior, assistant, runner, off role
0 Unclear	anything else (e.g. *SALES*, *IMPORT*, *Branch Accountant*, *Do not want to disclose*)

C.3 Region

Region	Locations
West	Mumbai, Nhava Sheva, Pune, Ahmedabad, Gandhidham, Baroda, Mundra, Aurangabad
North	Noida, Kanpur, Ludhiana, Jaipur, Panipat
South	Cochin, Chennai, Hyderabad, Bangalore, Coimbatore, Vizag, Tuticorin
East	Kolkata
Overseas	Nairobi, New Jersey

C.4 HR theme (from the workbook's `Sheet2`)

Theme	HR-priority options
Communication	Listening to employees and their concerns · Keeping employees informed
Grievances	Help resolve employee problems · Supporting employees when they need help

Theme	HR-priority options
Development	Help employees progress in their careers
Benefits & Facilities	Improve employee benefits and facilities
R&R	Recognising and appreciating good work
Process & Policies	Making rules and processes simple
Approachable	Being available and easy to approach
Engagement	Employee activities and engagement

D. Data lineage and reproducibility

Item	Detail
Source	`data/raw/Your Voice- Responses 21 OCT - FINAL.xlsx`; keep unchanged
Analysis sheet	`SWL - MASTERDATA`: 327 responses, 43 source columns, two header rows
Source discrepancy	Language exports total 330; master has 327. A verified row-level reconciliation is not available
Transformations	Harmonise response labels, repair designation header, remove name, create documented reporting groups and working scores
Grouping limits	Job levels are keyword approximations; Other departments are heterogeneous; no weighting to workforce composition
Outputs	`survey_clean.csv` and `codebook.csv`; regenerate by running top to bottom
Schema change	`TRUST_INDEX` renamed `CULTURE_MEAN` to identify an analyst-created descriptive measure
Environment	Project `.venv`, dependencies pinned by `uv.lock`; all analysis remains in this notebook

The option mappings above document transformations; the live codebook in §2 contains all source questions. Do not infer survey collection procedures or removal reasons from row counts alone.

Appendix E — Methodology reference

Status as of **30 October 2026**. “Used” means executed in this notebook; “planned” means specified but not performed. All results describe responding records unless stated otherwise. Research links support the method's meaning, not the validity of our particular survey.

Method / measure	Organisational purpose	Inputs / assumptions	Decision and current status	Limits / reference
Source and quality audit	Establish a trustworthy base	Master sheet, headers, missingness, label mapping, row counts	**Used**; raw preserved; names removed; row-count discrepancy documented	Unique employee identity, sampling frame and removal log not verified
Item distributions and favourable %	Identify strengths and improvement opportunities	Valid n per item; categories 1–5; favourable=4–5, unfavourable=1–2	**Used, primary descriptive evidence**	Sometimes is not neutral; no borrowed external thresholds. Civil Service example
Item/block means and culture summary	Provide a compact overview beside distributions	Equal category spacing, equal weights; culture summary uses 25 items	**Used as descriptive working measures**, not validated or branded indices	Do not correlate a composite with its own included outcome as driver evidence
Cronbach alpha and corrected item–total correlations	Inspect coherence of supplied blocks	Covariation of items; interpret alpha under its assumptions	**Used as diagnostics**; no automatic item deletion	Does not establish dimensionality or validity; EFA/CFA remains conditional
Spearman correlations	Explore relationships with advocacy, intention to stay and satisfaction	Independent respondent records; ordinal ranking; outcomes excluded from predictor list	**Used, exploratory**; no significance-based item screening	Associations do not establish causality or independent effects
Group descriptions and provisional n≥10 reporting rule	Understand variations relevant to follow-up	Tenure, department, region, gender, approximate levels	**Used**; show n; suppress small-group scores in comparison tables	Threshold is a project rule, not a proof of privacy or adequate precision
Kruskal–Wallis plus BY FDR adjustment	Assess exploratory differences across eligible groups	Independent records; adequate group sizes; 11 overlapping full/sensitivity tests	**Used**, joint family of 11 tests; retain effect size/context in interpretation	Omnibus result does not identify pairs or prove a median shift. Kruskal, BY
Response-style sensitivity	Check dependence on identical-category respondents	Keep full sample primary; compare a labelled alternative	**Used** for scores and exploratory tests	Exclusion is not assumed to improve validity
HR-priority counts and descriptive Cramér's V	Understand the one HR priority selected	Recompute from master; inspect expected cell counts and group sizes	**Used descriptively**; sparse-table asymptotic p-values withheld	V may be unstable; permutation inference conditional on decision need. SciPy
Comment coverage and repeated-text flags	Establish usable qualitative material	Six questions, nonblank answers, context-review flags	**Used as profiling only**	Short or repeated answers are not automatically invalid

Method / measure	Organisational purpose	Inputs / assumptions	Decision and current status	Limits / reference
Codebook-based qualitative content analysis	Explain employee concerns, strengths and suggestions	Contextual reading, code definitions, pilot/revision, multi-label records, review trail	**Used, exploratory**; all 1,892 nonblank answers accounted for; second assistant reading covers 568, revises 53 decisions, and retains 75 context-confirmation cases; no independent human validation	Avoid equating word counts or automatic sentiment with reviewed themes; distinct from reflexive TA. Method distinctions, review guidance
Quantitative–qualitative integration	Build an evidence-backed organisational story	Rating patterns, reviewed coded comments, HR choices; show disagreements	**Used, exploratory**; paired item table, rating–comment bridge, question-context profiles and evidence register	Convergence is not causal proof; prompted topic counts are not independent validation
Equal-weight frequency evaluation equivalence check	Test whether a proposed fuzzy-style calculation adds information	Complete responses, empirical category shares, equal item weights, scores 1–5	**Used as an algebra/data check**; exactly equals the ordinary mean, so omit as a separate insight	Specific construction, not a validation or rejection of all fuzzy approaches
Calibrated fuzzy analysis	Potentially represent graded decision concepts	Explicit memberships, anchors, weights, validation and sensitivity	**Conditional; not implemented**; no calibrated inputs supplied	Membership is not probability; adopt only with decision value beyond baseline. Zadeh, questionnaire model
EFA/CFA or multivariable ordinal models	Resolve a necessary measurement or association question	Ordinal-aware specification, identifiability, fit, sample/ceiling checks and validation	**Conditional; not implemented**	No automatic EFA→CFA validation on the same sample; predictive validation is not causal identification
Prioritisation, action roadmap and evaluation	Translate evidence into measurable interventions	Reach, severity, evidence, feasibility, proposed owners, baseline and review measures	**Evidence register and action options drafted**; final targets, owner agreement and executive PowerPoint remain later	No invented ROI, causal effects or success targets. CIPD
Exact bigrams and trigrams	Navigate recurring phrases and check topic labels	Adjacent words, sentence/comment boundaries, preserved negation, unique-record support ≥5, name filtering	**Used as supporting evidence**, not thematic coding or sentiment analysis	English-focused; surface form and repeated wording affect counts. NLTK
Semantic coding ledger and coverage	Make qualitative decisions reproducible and preserve no-concern/unclear answers	Hash-locked comment order; one assistant read/coding pass; multi-label topics and explicit stance	**Used**; all nonblank answers accounted for, cross-references/translation flags documented	No independent human validation or inter-rater reliability; counts exploratory. Framework method

Method / measure	Organisational purpose	Inputs / assumptions	Decision and current status	Limits / reference
Paired and contextual descriptive follow-up	Examine within/cross-team differences and tenure questions already raised	Same-record item counts, group n and suppression; no new demographic significance search	**Used**; counts/means/ favourable shares and response-style sensitivity	Different item wording and group composition limit interpretation; not actual turnover prediction
Focused cross-team/fairness profiles	Deepen the two user-selected primary priorities	Paired original-category counts, fairness response breadth, preselected group descriptions; no new significance search	**Used**; retain Sometimes, suppression and explicit denominators	Descriptive overlap is not causation, unfair-treatment prevalence or proof of a department-specific cause
Same-answer topic network, VOSviewer-inspired	Show which coded topics are discussed together and support follow-up	Multi-label suggestion/ mixed answers; full counting; association normalization; custom layout and greedy modularity; primary minimum 20 answers/ topic and 10/pair	**Used, exploratory**; offline interactive map, static PNG/ SVG and compatible import files	Not native VOSviewer algorithms, latent constructs or employee relationships; prompt and multi-topic-answer dependence. Interpretation, format
Network context/ parameter sensitivity	Make graph dependence on prompts and display choices visible	Exclude each question; thresholds 5/10/15/20; resolutions .8/1/1.2; report pair group changes	**Used**; fixed primary coordinates/colors for interactive comparisons	Not an independent validation or statistical stability test
Documented same-assistant re-review and finding checks	Tighten code boundaries and trace the key claims	All 104 initial flags plus defined core cohorts; 568 unique comments reread; original ledger and reasons retained	**Used**; 53 changes, before/ after counts and recomputed finding register exported	Not an independent coder, accuracy estimate, incident verification or inter-rater reliability statistic
0–90-day implementation roadmap and KPI dictionary	Make recommendations concrete, owned and measurable	Pilot starts at organisational approval; operational baseline Days 0–14; proposed process standards separated from observed baselines	**Draft completed for review**; proposed owners, 13 actions, outcome/process measures and Day-0/14/30/60/90 gates	Owner/capacity approval and numerical outcome targets need organisational context; no promised causal effect
Relative-weights importance (Johnson) on actionable items	Test the priority order: which actionable items move with recommend / satisfied / intention to stay	19 CRE/RES/FAI/CAM items (pride and belonging excluded as near-outcomes); outcome = mean of OVR1, OVR4, PRI3; 500 bootstraps; straight-liner and anonymous-only sensitivity	**Used (Step 7)**; read as tiers via bootstrap top-5 probabilities and a priority matrix	Correlational; halo and ceiling effects; not causal and not an attrition model. Johnson 2000
Four-lens evidence check	Decide the presentation priority order transparently	Score rank, outcome link, HR forced choice, "one change" comment records; grading rules fixed before reading results	**Used (Step 7)**; revised order: fair decisions & growth, then leaders listen & act; cross-team as targeted pilot	Thresholds are project rules, not standards; a missing lens is shown as "—", not weak

Method / measure	Organisational purpose	Inputs / assumptions	Decision and current status	Limits / reference
Named vs anonymous comparison	Show how much the optional name field may affect the picture	`gave_name` flag; favourable shares and Mann–Whitney on the culture summary	**Used (Step 7)**; anonymous figures reported beside overall ones	Consistent with, not proof of, social-desirability bias; self-selection possible

Not selected: standard eNPS from the five-point item; an official Trust Index label for our custom mean; automatic causal “driver” claims; uncalibrated fuzzy rankings; generic word clouds as qualitative findings; unchecked sparse-table inference; individual attrition predictions without observed outcomes. NPS protocol.
